### **DETAILED ACTION**

Applicant's election without traverse of plywood board in the reply filed on 2/28/2008 is acknowledged.

Claims 1-14 are pending. Claims 1-3 and 14 are presented for examination on the merits as they read upon the elected subject matter. Claims 4-13 are withdrawn from consideration as being drawn to non-elected subject matter.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Ito et al. (JP 09201424).

Ito et al. teaches an extinguishing agent comprising a powder of ammonium dihydrogen phosphate having diameter of 1.5 to 53 microns (abstract).

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

Art Unit: 1611

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 14 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ito et al. (JP 09201424) in view of Pearson (US 4,552,803).

### **Applicant's Invention**

Applicant claim the composition as addressed in above 102(b) rejection. Claim 14 defines a plywood board comprising the composition.

### **Determination of the scope and the content of the prior art**

#### **(MPEP 2141.01)**

Ito et al. teaches the composition as addressed under 102(b) for improving the performance a fire extinguisher used on wood.

### **Ascertainment of the difference between the prior art and the claims**

#### **(MPEP 2141.02)**

Ito et al. does not teach the composition is used on plywood. It is for this reason that Pearson is joined.

Pearson teaches a fire-retardant powder which does not have objectionable odors (column 1, lines 49-51). The powder comprises ammonium phosphate (column 2, lines 1-12). The invention is incorporated in making plywood and particle board to protect against fire hazard problems (column 1, lines 35-40; column 4, lines 34-37). The powder may be reduced in size by grinding (column 4, lines 8 and 9).

### **Finding of prima facie obviousness**

#### **Rationale and Motivation (MPEP 2142-2143)**

It would have been obvious to one of ordinary skill in the art at the time of the invention to combine the teachings of Pearson and Ito et al. to incorporate the composition onto plywood board. One would have been motivated to treat plywood with the composition because Pearson teaches impregnating plywood with fire resistant powders comprising ammonium phosphate prevent fire hazard problems. Therefore, one would have been motivated incorporate the composition onto plywood board since is vulnerable to catching fire.
